

# HULAS INFRA PRE-ENGINEERED BUILDINGS (PEB)

## APPLICATIONS

Pre-Engineered Building (PEB) are designed and fabricated to meet clients requirements and under universal standards. Pre Engineered Building (PEB) consists of four important components, primary members, secondary members, metal roof/cladding system and connection fasteners. These components are designed in a way that they are compatible with each other. The fabrication of these components is carried out in the factory under strict quality control as per detailed shop drawings. These components are transported to the site with proper markings and assembled at the site as per erection drawings.
